

The CARPATIC roof tiles are made of zinc-plated (Z225-Z275) shaped steel sheet with thicknesses between 0.50 and 0.60 mm, coated with a single layer of glossy or matte paint. The CARPATIC metallic roof tiles are available in lengths between 500 mm and 7000 mm.

The CARPATIC metallic roof tiles are manufactured in 24 shades, providing a perfect solution for any structure. If you wish to have a roof with modern forms and materials, which also blends in with the local environment, the CARPATIC model is the right choice.

This model was inspired by the Carpathian ethnographic traditions, which features a predominantly angular geometry. This type of buildings erected long ago can now be fitted with a new and durable state of the art roof, that does not collide with the architecture of the surrounding buildings. In addition, those who wish to build a new house or building bearing the specific features of the Carpathian architecture will have an easy solution at hand for the roof.

1 - Total width **2** - Effective width

Technical characteristics

Material	Steel sheet, galvanized on both sides, protected with polyester
Nominal thickness	0.5 mm sheet steel
Total width	1180 mm
Effective coverage width	1100 mm
Module length	350 / 400 mm
Weight per unit area	about 5 kg /sqm
Minimum slope	8° if diagonal joints are necessary/ 14 ° in the case of diagonal joints
Warranty	10-year warranty for color characteristics and corrosion
Expected lifespan	50 - 60 years for the roof, resistance to temperature changes
